                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                                                                                                                                                                                                                          The invention relates to recombinant mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor (CRF-R) proteins having high affinity for CRF and nucleic acid molecules encoding such receptor proteins. Polypeptides of the invention can be used to reduce high levels of adrenocorticotrophic hormone caused by excess CRF and so can be used to treat diseases such as Cushing's syndrome, pituitary tumours, chronic stress, anorexia nervosa, alcoholism and irritable bowel syndrome. They are used in pharmaceuticals and in the production of antibodies. The present sequence is human CRF-RA2 splice variant cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300

wew nucleic acid and its encoded G protein-coupled corticotropin-releasing factor receptor, useful for diagnosing or treating e.g. ACTH levels or high cortisol levels associated with Alzheimer's disease or Cushing's disease.

Disclosure; Col 57-62; 42pp; English.

The invention discloses an isolated nucleic acid, which encodes a mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor protein. CRF is a hypothalamic peptide which stimulates the secretion and biosynthesis of pitultary adrenocorticotropinc hormone (ACTH) leading to increased adrenal glucocorticotropinc hormone (ACTH) leading to increased adrenal glucocorticotd production. The nucleic acid, or the CRF receptor that it encodes, is useful in bioassays. The nucleic acid or CRF receptor is particularly useful for providing recombinant receptors that allows the development of less expensive, more sensitive and automated means for assaying CRF and CRF-like compounds and developing CRF-based cherapeutics. The nucleic acid, or fragments of its encoded receptor, are useful in therapy, e.g. gene therapy for reducing ACTH levels or treating high cortisol levels associated with Alzheimer's diseases, Cushing's are also useful in diagnostic assays, e.g. for diagnosing Alzheimer's caseases are alcoholism. The sequence presented is the human splice variant of CRF-RI, CRF-R2, CDNA

The invention relates to a cell line expressing a recombinant corticotropin releasing factor receptor (CRF-R) encoded by a nucleic acid expression vector.

Corticotropin releasing factor receptor (CRF-R) encoded by a nucleic acid expression vector.

Compounds a recombinant CRP-R. The vector encodes human CRF-R, subtype A, receptor in a suitable host cell, by expressing the vector, where the nucleic acid encodes CRF-R that binds GRP or nucleic acid degenerate to the naturally occurring nucleic acid. The cell line is useful for expressing hortern by recombinant techniques and in binding assays using CRF-R which are used for rapidly screening large number of compounds to determine which compounds are capable of binding to CRF-R, and for identifying new CRF-like ligands. The polypeptides expressed by the cell line inhibit CRF binding to CRP-R and can inhibit CRF-in undeed adrenocorticotropin hormone (ACTH) release in vitro by several cells, and so are useful for radding high ACTH levels caused by excess CRF, and for treating Cushing's disease, pitulary tumours, alzaheimer's disease, creating Cushing's disease, pitulary tumours, alzaheimer's disease.

CC melancholic depression, anorexia nervosa, chronic stress, alcoholism and hyporecortisolaemia. The proteins are also useful for treating gastrointestinal disorders such as irritable bowel syndrome, abnormalities such as pre-eclampsia, which occur during pregnancy, to creduce pregnancy-rinduced compilcations and increased CRF lavels which can ocherwise result in excessive release of ACTH. The proteins are also checker pregnancy-ried and areas as the disoness and increased CRF lavels and ocher domesticated animals, inducing twinning in livestock and other domesticated animals, inducing twinning in livestock and other domesticated animals, inducing temperation in livestock and other domesticated animals, inducing temperature asplication of the receptor, human corticotropin releasing factor receptor, hCRF-RADI ceptor receptor, hCRF-RADI ceptor receptor and other domestic
nucleic acid encoding human corticotropin releasing factor (CRF) receptor useful for reducing high adrenocorticotropin hormone, by binding to CRF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     480

The invention relates to an isolated mammalian G protein-coupled corticotropin-releasing factor (CRP) receptor protein or polypeptide from Rat, Mounes or human appearing as ADJ65801, ADJ65805, or ADJ65810, encoded by the nucleic acids appearing as ADJ65800, ADJ65802, ADJ65804, or ADJ65809. Also included are a composition comprising CRF-R, an antibody generated against CRF-R and a diagnostic, kit, for assaying of or the presence in biological fluids of CRF-R protein, protein analogues and/or fragments, comprising CRF-R) and/or one or more antibodies. The protein, polynucleotide or composition is useful in diagnosing and treating Alzheimer's disease, melancholic depression, anorexia nervosa, Cushing's disease, hypercortisolaemia or alcoholism, gastrointestinal disorders (e.g. irritable bowel syndrome) or physiological conditions (e.g. inflammation or Addison's disease), in regulating cardiac perfusion and in modulating blood pressure, thus combat hypotension. The present sequence encodes human splice variant CRF-RAZ.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 633
                                                                                                                                                                                                                                                                   The protein encoded by this sequence can be used to determine CRF (e.g. over- or under-production, high levels of CRF late in pregancy may indicate risk of premature labor). Cells expressing the protein are used to identify e.g. antibodies, which can be used to modulate signal transduction activity mediated by CRF receptors. Typical applications are in the treatment of Cushing's disease, pituitary tumors, etc. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A cDNA clone (AAT28968), designated CRF-RI, codes for a new G-protein-coupled receptor protein (AAR97290), which has high binding affinity for corticotropin releasing factor (CRF). It was isolated from a cDNA library prepd. from human pituitary corticotrope adenoma (Cushing's tumour) by screening using an expression cloning approach; a splice variant (see AAT28969) was also identified. The cDNA can be used as a probe for detecting the presence of CRF receptor-encoding nucleic acids in samples or for the identification of additional CRF receptors, or can be used for prodn. of recombinant CRF receptor, or in gene therapy to target a vector to specific cell types
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 GGTAGCCGAGCCCCGAGGATGGGAGCACCCGCACCCGTCTCGTCCATCAGGCCTT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
The invention relates to recombinant mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor (CRF-R) proteins having high affinity for CRF and nucleic acid molecules encoding such receptor proteins. Polypeptides of the invention can be used to reduce high levels of adrenocorticotrophic hormone caused by excess CRF and so can be used to treat diseases such as Cushing's syndrome, pituitary tumours, chronic stress, anorexia nervosa, alcoholism and irritable bowel syndrome. They are used in pharmaceuticals and in the production of antibodies. The present sequence is human CRF-RA1 cDNA
                                                                                                                                                                           Human; G protein-coupled corticotropin-releasing factor receptor; CRF; CRF-R; adrenocorticotrophic hormone; irritable bowel syndrome; therapy; Cushing's syndrome; pituitary tumour; chronic stress; anorexia nervosa; receptor; alcoholism; CRF-RA1; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               releasing factor receptor protein for treating e.g. Cushing's syndrome, pituitary tumors, stress, anorexia, alcoholism or irritable bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated recombinant mammalian G protein-coupled corticotropin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sawchenko

The invention discloses an isolated nucleic acid, which encodes a mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor protein. CRF is a hypothalamanic peptide which stimulates the secretion and blosynthesis of pituitary adrenocorticotrophic hormone (ACTH) leading to increased adrenal glucocorticotid production. The nucleic acid, or the CRF receptor is particularly useful in bioassays. The nucleic acid or CRF receptor is particularly useful in bioassays. The nucleic acid or CRF receptor is particularly useful for providing recombinant receptors that allows the development of less expensive, more senaltive and automated means for assaying CRF and CRF-like compounds and developing CRF-based therapy e.g. gene therapy for reducing ACTH levels or treating high cortisol levels associated with Alzheimer's diseases, Cushing's diseases, molecula in diagnostic assays, e.g. for diagnosting Alzheimer's diseases or are also useful in diagnostic assays, e.g. for diagnosting Alzheimer's diseases or alcoholism. The sequence presented is the human CRF-RI CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCCGCCCGCGTGAATTACTCCCGAGTGCCAGGAGATCCTCAATGAGGAGAAAAAAAGCAAG 420

The invention relates to a cell line expressing a recombinant corticotropin releasing factor receptor (CRF-R) encoded by a nucleic acid expression vector, or a cell line containing a nucleic acid vector encoding a recombinant CRF-R. The vector encodes human CRF-R, subtype A, variant 1 (hCRF-RA1). Also included is expressing a recombinant CRF ceeptor in a suitable host cell, by expressing the vector, where the nucleic acid encodes CRR-R that binds CRF or nucleic acid degenerate to the naturally occurring nucleic acid. The cell line is useful for expressing hCRF-RA1 protein by recombinant techniques and in binding assays using CRF-R which are used for rapidly screening large number of compounds to determine which compounds are capable of binding to CRF-R, and for identifying new CRF-like ligands. The polypeptides expressed by the cell line inhibit CRF binding to CRF-R and can inhibit CRF-induced afrencorticotropin hormone (ACTH) release in vitro by several cells, and care useful for reducing hAgh ACTH levels caused by excess (RRF, and for treating Cushing's disease, pituitary tumours, Alzheimer's disease, melancholic depression, anorexia nervosa chronic stress, alcoholism and hypercortisolaemia. The proteins are also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel cell line expressing nucleic acid expression vector comprising nucleic acid encoding human corticotropin releasing factor (CRF) receptor useful for reducing high adrenocorticotropin hormone, by binding to CRF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cushing's disease; pituitary tumour; Alzheimer's disease; melancholic depression; anorexia nervosa; chronic stress; alcoholism; hypercortisolaemia; gastrointestinal disorder; irritable bowel syndrome; pre-eclampsia; pregnancy-induced complication; arthritis; abortion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human cDNA encoding corticotropin releasing factor receptor, hCRF-RAI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ä

abnormalities such as pre-eclampsia, which occur during pregnancy, to treduce pregnancy-induced complications and increased CRF levels which contentwise result in excessive release of ACTH. The proteins are also useful for locally treating arthritis and other similar aliments, modulating action of CRF in mammals, treating the pregnancy-related pathological disorders in mammals. The CRF-R polypeptides are used in such areas as the diagnosis and/or treatment of CRF-dependent tumours, enhancing the survival of brain neurons, inducing abortion in livestock and other domesticated animals, inducing twinning in livestock and other domesticated animals. The present sequence encodes corticotropin

The present invention relates to the isolation of novel CDNA sequences which encode human secreted proteins. The CDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polymuclectide sequences. The proteins are useful for identifying compounds that modulate their action and the cell is also useful for identifying compounds that modulate expression of the polymuclectide sequences of compounds the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and the invention are also useful in gene therapy. 09-SEP-2003; 2003WO-US028226.

```
The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the inventing, preventing or diagnosing diseases. Compounds useful in the treatment of GPCR-related diseases, a transgenic compounds useful in the treatment of GPCR-related diseases, a transgenic mouse comprising a GPCR transgene or in an endogenous GPCR gene; cells derived from the trasngenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising comprising a GPCR nucleic acid. The GPCR nucleic acid and proteins may be used in the diagnosis, treatment or prevention of a wide variety of comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, distrances, food poisoning or irritable bowel associated infarction; muscular disorders (e.g., angina, cardiac arrhythmia or mydrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or syndrome); bone and joint disorders (e.g., angina, cardiac arrhythmia or anemia or leukaemia); menume disorders (e.g., autoimmune disorders or ALDS); bone and joint disorders (e.g., autoimmune disorders or ALDS); bone and joint disorders (e.g., autoimmune disorders or consens); netabolic or nutritius, mayme deficiency-related diseases or vitamin deficiency-related diseases); and disorders or the kidney, liver, lung, breast, ovary, uterus, prostate, testis skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence data for this patent did not form part of the printed specification; those sequences not shown were obtained in electronic format directly from NIPO at ceptoporaries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 146 ceadecedeadecedecedecederecerendaardrecenadaacedecearreadaac

```
The invention relates to identifying candidate compounds for regulating skeletal muscle mass or function, comprising contacting a test compound with vertebrate corticotropin releasing factor 2 receptors (CRP 2 R), determining if the compound binds to or activates CRF2R, selecting compounds that bind or activate CRF 2 R, and determining if compound increases muscle mass or function in muscle arrophy model. Also included are identifying candidate therapeutic compounds from a group of one or more candidate compounds which have been previously determined to bind to or activate a vertebrate CRF 2 R (comprising administering the candidate compound to a non-human animal and determining whether the candidate compound regulates skeletal muscle mass or function in the treated animal), increasing skeletal muscle mass or function in a subject in which such an increase is desirable (comprising identifying subject in which an increase in muscle mass or function is desirable and administering to the subject a safe and effective amount of a CRF 2 R
                                                                                                                                                                                                                                                  1559 GACCTGTTAGGTCTCATGCCCACTCCCCCAGGAGCAGCTGGCACTGACAGCCTGGAGGGG 1618
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying compounds for regulating skeletal muscle mass or function, by contacting test compound with vertebrate corticotropin releasing factor2 receptors (CRF2R), selecting compounds that bind or activate CRF2R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; 88; gene; corticotropin releasing factor receptor; CRF1R; CRF2R;

      ઠ
agonist), a purified antibody specific for a CRPZR (where the antibody is a chimaeric or human antibody), and a pharmaceutical composition comprising a safe and effective amount of a CRPZR agonist and carrier. The methods are useful for identifying candidate compounds for regulating skeletal muscle mass or function, for increasing skeletal muscle mass or function, for increasing skeletal muscle mass or identifying candidate compounds that are potentially useful in the treatment of skeletal muscle dystrophy and for identifying compounds that prolong or augment the agonist-induced activation of CRPZR or of a CRPZR signal transduction pathway. The compound is useful for treating skeletal muscle hypertrophy and for modulating skeletal muscle hypertrophy and for modulating skeletal muscle atrophy induced by e.g. surgery, bed rest, broken bones, infectious disease or AIDS cachexia. The present sequence encodes a corticotropin releasing factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480
